

Concrete Stairs

SpanWright.co.uk

Concrete Stairs are the ideal way to provide access to basements, upper floors and lofts. The Precast units provide safe solid access during construction and a secure base for attractive finishes in the completed construction

Tailored - Wright Quarry Products design team provide stair solutions specific to each plan in compliance with relevant building regulations

Simple - Precast stairs will usually be placed along with the flooring installation

Safe - Concrete stairs provide a much safer means of accessing other floors during construction than ladders or other temporary systems

BEFORE

AFTER

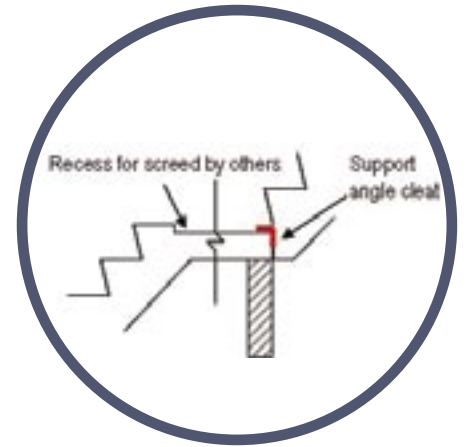

Attractive - Using concrete as a resilient, solid, durable base, attractive finishes can be added in the form of timber, stone, tiles or another finish of choice

Concrete Stairs

SpanWright.co.uk

Structural details - Stairs are designed and detailed to suit the requirements of each job

Multistorey - Precast stairs are the fast effective way to provide access to multiple floors

Surface finish - Concrete stairs are generally cast from high quality steel or timber moulds. One surface, the top, bottom or one edge will be troweled or in the case of landing slabs may be left rough to receive a screed

Fitting - Wrights are able to supply a variety of lifting systems in all our precast products
