

# Precast Flooring

SpanWright.CO.UK

Concrete Flooring is one of the key elements of a secure investment in any residential property, contributing to the structure's safety, durability and thermal performance  
**Spanwright's precast design makes it the No. 1 choice**

**Available** - A large stock of sizes in 50mm increments allows fast and efficient delivery times

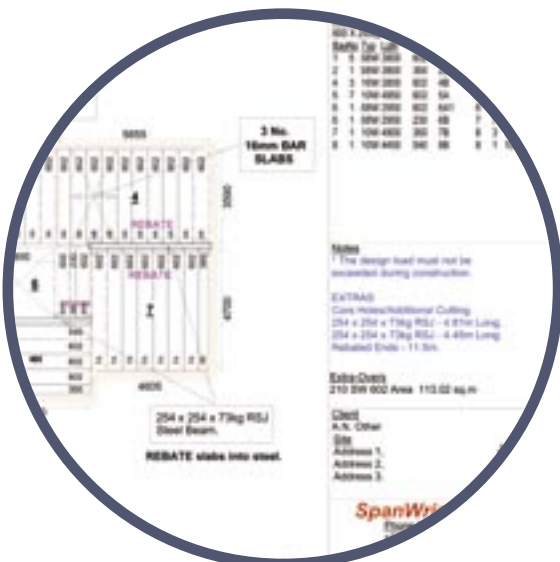

**Affordable** - Our highly efficient production technologies combined with our range of products and experience in design of precast elements enables us to provide cost efficient solutions

**Reliable** - Fitting of precast is a fast process and not subject to the same weather dependency as traditional construction methods with an average house being covered within a few hours

**Suitable** - Specially designed for residential construction, Spanwright precast comes in 600mm wide, lighter weight units and is simple to finish with it's zero camber profile

# Precast Flooring

SpanWright.CO.UK

Concrete Floors are used at ground and first floor level in houses depending on the requirements. Here's why each should be considered by any house builder.

**A Solid Ground Floor** - The traditional problems of subsiding floors where fill is deep or poorly compacted is easily solved by use of a suspended concrete floor

**A Secure First Floor** - The excellent fire resistance and sound barrier provided by a concrete first floor make it an essential component of a safe and quiet home

**A Safe First Floor** - Wright Concrete Products attention to safety combined with the usefulness of a concrete floor as a safe platform for following trades will aid the running of a safe site

**A Simple Ground Floor** - A floor can be prepared off site complete with service openings and brought to site ready to be installed, grouted and used as a platform for the rest of construction
